

Case BrightTV Ownership Analysis

BrightTV OTT Platform — Executive Case Study Overview

1

Company Overview

BrightTV is a subscription-based OTT platform delivering live and on-demand video content. Faces a strategic decision: own the OTT platform internally or continue with a third-party platform. Core objective is to determine the optimal path through financial valuation.

4

Strategic Considerations

Evaluate build-vs-buy trade-offs, long-term platform scalability, cost efficiency under owned infrastructure, and alignment with BrightTV's growth and content delivery strategy.

2

Presentation Objective

20-min executive presentation covering: cost and usage trend insights, financial benefit analysis of OTT ownership, context on documented vs. increased consumption during live events, and evaluation of current model's capacity to grow BrightTV's user base.

5

Financial Valuation Focus

Assess whether owning the OTT platform is financially beneficial vs. third-party dependency. Analyze cost trends, platform usage metrics, and ROI projections to support executive decision-making.

3

Data & Analysis Notes

Target end-users sourced from CSV datasets, converted to SA currency. Consumption is logged per session per subscriber. Subscriber-level user data may be referenced throughout the presentation to support findings.
